c. 1851: The Riemann Mapping Theorem

Let $U \subsetneq \mathbb{C}$ simply connected and open. Then, U is conformal (complex diffeomorphic) to \mathbb{D} .

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のQで

c. 1907: The Uniformisation Theorem as Most People State it

Let Σ be a simply connected 1-dimensional complex manifold (a Riemann surface). Then, Σ is conformal to one of the following:

- C, the entire complex plane (equipped with Euclidean geometry)
- \blacktriangleright D, the unit disc (equipped with hyperbolic geometry)
- C ∪ {∞}, the Riemann sphere (equipped with spherical geometry)

Natural Questions and Possible Generalisations

- Why is everything complex?
- Why do we only care about simply connected Riemann surfaces?
- Can we extend this to higher dimensions?

A 3D Analogue: Model Geometries

A model geometry is a (complete, homogenous), simply connected Riemannian manifold X together with its group of isometries Isom (X). A Riemannian manifold M is modelled by X if there exists an isometric diffeomorphism $M \cong X/\Gamma$ (where the action of Γ on X has no fixed points and is discrete).

The Theorem? Conjecture? Whatever it is Statement

Every compact orientable 3-manifold can be decomposed into "canonical" submanifolds such that each piece is modeled by one of the eight Thurston geometries.

Three Familiar Thurston Geometries

- Euclidean geometry: \mathbb{R}^3 over $\mathbb{R}^3 \times O(3, \mathbb{R})$
- ▶ Spherical geometry: S^3 over $O(4, \mathbb{R})$
- Hyperbolic geometry: H^3 over $O^+(1,3,\mathbb{R})$ (what)

The Product Geometries

 $S^2 \times \mathbb{R}$ $H^2 \times \mathbb{R}$

Uhhhhhhhhhhhh

$$\mathsf{Nil} = \left\{ \begin{pmatrix} 1 & x & y \\ 0 & 1 & z \\ 0 & 0 & 1 \end{pmatrix} : x, y, z \in \mathbb{R} \right\}$$
$$\mathsf{Sol} = \left\{ \begin{pmatrix} e^z & 0 & x \\ 0 & e^{-z} & y \\ 0 & 0 & 1 \end{pmatrix} : x, y, z \in \mathbb{R} \right\}$$
$$\mathsf{SL}_2(\mathbb{R})$$

An Important Corollary: The Poincaré Conjecture

A 3-manifold is homotopy equivalent to the 3-sphere if and only if it is homeomorphic to the 3-sphere.
